

I am Julian Hundeloh,
a passionate full-stack developer with focus on UX and Mobility.

Advise. Develop. Lead.

I have been coding since I have been 10 and since then I have gained deep experience in a variety of technologies and numerous projects with intercultural teams and different company sizes. Given this broad skill set I can support you along the whole implementation cycle - from the definition of architecture and actual development to testing, end-user training and safe deployment in production. As technical skills alone are not the key to success I am a vigorous proponent of open communication during all stages of projects.

Are you looking for...

- ... a lead developer who can independently guide a (distributed) team to success?
- ... a full-stack expert with excellent cross-topic skills to plan and implement applications in a team or alone?
- ... a coach who helps your team to get into gear?
- ... a trainer for developer or end-user trainings?
- ... a cross-topic expert who can identify performance or security potential in your applications?

This list is not exhaustive - I will be happy to discuss your requirements in detail. Please get in touch with me.

Skills

Languages

Recent projects

Experience Town

[Lead Developer and Architect](#) of a platform that brought user research onto a new level in one of the largest pharma companies of the world. It allows researchers to find the right target group, create custom surveys and turn the results into actions. Users can learn user centric design principles and create their own Design Thinking guided projects. Part of the project was also a mobile app with real-time notifications.

My Approvals

[Lead Developer and Architect](#) of a custom UI5 application that is designed to be a one stop shop for approvals in one of the largest pharma companies of the world with over 50.000 users. Part of the project was also a mobile app and a desktop app with real-time notifications.

Fiori Launchpad XXL

[Lead Developer](#) in one of the largest SAP Fiori Launchpad rollouts worldwide. The Launchpad is designed to be the central entry point for employees for any HR related topic. Various custom implementations were necessary, e.g. an improved personalization concept, a fine granular authorization concept and the integration of apps residing on different servers. The total number of users is over 100.000.

AP Invoice Processing

[Lead Developer](#) of a lighthouse project that combines SAP Fiori and SAP Screen Personas in parallel in order to increase the efficiency of invoice processing processes at the largest food company in the world. Additionally, for analytical purposes SAP Smart Business applications with custom SAP HANA views were developed.

Hybrid Requisition Approvals

[Lead Developer and Coach](#) of a packaged Approve Requisitions application at the largest telecommunication company of the Philippines. The application is wrapped in a SAP Fiori Client and targets iOS and Android devices. Custom adaptations of the SAP Fiori Client were necessary to support custom SAML authentication behaviour and to have an offline mode while using the application in remote locations.

KPI Dashboard on SAP CP

[Lead Developer](#) of an high performant KPI dashboard application for board members of one of the biggest insurance companies in the world. This application makes use of OData services exposed via HANA XS on SAP Cloud Platform.

CRM for Football

[Lead Developer and Coach](#) of the SAP CRM on HANA implementation at Germany's largest football association. The focus was on Activity and Campaign Management to efficiently manage event invitations and make this as smooth as possible for VIPs.
